Experiment - 3

Name: Srijan Tripathi

UID: 24BAI70081

Branch: BE-CSE-AIML

Section/Group: 24AIT_KRG_1_A

Semester: 5

Date of Performance: 31/7/26

Subject: ADBMS

Subject Code: 24CSP-310

You are given with the Employee schema; the task is to find the highest score for each respective department.

For eg: department D1 have the highest score as 5.28. Hence in the output, final updated score for D1 should be 5.28.
Same with the other departments i.e., D2, D3 and D4.

Solution:

```
UPDATE Employee E
SET SCORES = (
   SELECT MAX(SCORES)
   FROM Employee
   WHERE DEPT = E.DEPT
);

SELECT * FROM Employee;
```

(B):

A company maintains employee salary records for different departments. The management wants to prepare a report containing employees whose salaries fall among the **top three highest distinct salary values** within their respective departments. If multiple employees receive the same qualifying salary, all such employees must be included in the final report. Display the department name, employee name, and salary for every qualifying employee.

Solution:

```
SELECT SELLER_ID
 FROM ORDERS
GROUP BY SELLER_ID
HAVING  SUM(AMOUNT)=
(
SELECT MAX(MAX_AMT)
FROM
(SELECT seller_id,
SUM(AMOUNT) AS MAX_AMT
FROM ORDERS
GROUP BY SELLER_ID
)
)
```

(C): SALES ANALYSIS PART 1

A company maintains records of products sold by different salespersons. The management wants to prepare a sales performance report by identifying the salesperson(s) who generated the highest overall sales revenue. If multiple salespersons have the same highest total sales amount, all of them must be included in the final report. Return the seller ID(s) satisfying this condition.

Solution:

```
SELECT
    D.NAME AS DEPARTMENT,
    E.NAME AS EMPLOYEE,
    E.SALARY AS SALARY
FROM
EMPLOOYEE AS E
JOIN
DEPARTMENTT AS D
ON
E.departmentId = D.ID
WHERE
(
    SELECT COUNT(DISTINCT E2.SALARY)
    FROM EMPLOOYEE AS E2
    WHERE E2.departmentId = E.departmentId
    AND
    E2.SALARY > E.SALARY
) < 3
ORDER BY D.NAME;
```
