Experiment - 4

Name: Srijan Tripathi
UID: 24BAI70081
Branch: BE-CSE-AIML
Section/Group: 24AIT_KRG_1_A
Semester: 5
Date of Performance: 31/7/26
Subject: ADBMS
Subject Code: 24CSP-310

(A)

(i) You are given a table tbl_happiness that contains the ranking of happiness for different countries. Your task is to retrieve all the records from the table **while ensuring that "India" and "Sri Lanka" appear at the top, followed by the rest of the countries in their original ranking order.**

Solution:

```
SELECT *,
 CASE
    WHEN country = 'India'
THEN 1
       WHEN country = 'Sri
Lanka' THEN 2
       ELSE  3
       END AS
DERIVED_RANK
FROM tbl_happiness
ORDER BY DERIVED_RANK,
RANKINGS;
```

(B)

(ii) Make all the rankings in descending order except **India** and **Sri Lanka**.

Solution:

```
SELECT *,
  CASE
   WHEN country = 'India' THEN 1
WHEN country = 'Sri Lanka' THEN
2
 ELSE  3
END AS DERIVED_RANK
FROM tbl_happiness
ORDER BY DERIVED_RANK,
RANKINGS DESC;
```

(C)

A company maintains employee information in a single table where each employee may report to another employee acting as their manager. Prepare a report that displays the details of every employee who supervises at least one other employee. The report should include the manager's employee ID, name, total number of direct reports, and the average age of those reporting employees. The average age should be rounded to the nearest whole number and the final result should be sorted by employee ID.

Solution:

```
SELECT m.employee_id,  m.name,
COUNT(e.employee_id) AS reports_count,
ROUND(AVG(e.age)) AS average_age,
FROM Employee m,
JOIN Employee e
ON m.employee_id = e.reports_to
GROUP BY m.employee_id, m.name
ORDER BY m.employee_id;
```
